

With Certabo Da Vinci it is also possible to play games between humans supervising them via a chess engine or simply saving for later analysis directly in .png format.

The Da Vinci computerized chessboard is made with fine Boxwood, Acacia wood and finished with refined frames of Italian walnut or maple.

The Certabo Da Vinci can be directly interfaced with the Certabo app. Once the chess board is turned on, can be very simply identified remotely by your Android or ios phone/tablet to can start the game or select the various game options, all simply from the phone display.

But that's not all... as a perfect chess computer, the Certabo Da Vinci can also be transformed into a digital e-chessboard and thus connected to a PC, Mac to your Android phone directly to take advantage of all the innumerable potentials of the Certabo open source software range and not only.
